Hiring Manager
IT Services
Simon Fraser University
Burnaby, BC

Dear Hiring Manager,

I am writing to apply for the Business Analyst position with SFU IT Services. With a Bachelor of Science in Computer Science, a Master of Business Administration, and over three years of hands-on experience analysing business needs, documenting processes, and delivering functional specifications in a complex, multi-site environment, I am confident I can contribute meaningfully to SFU's mission of advancing innovation through effective use of data and technology.

In my current role at Community Builders Group, a Vancouver-based non-profit operating 16 supportive housing sites with over 1,000 beds, I lead all phases of business analysis for medium to large software solutions that serve cross-functional stakeholders. I have gathered and documented requirements for a centralised tenant management system consolidating data from 15 rooming houses, facilitated process re-engineering workshops using BPMN to standardise intake and service delivery workflows, and coordinated UAT across frontline staff to ensure quality assurance before deployment. This work has directly improved referral completion rates by 25% and reduced monthly reporting time by 60% through Power BI dashboards I designed and built.

My technical background in computer science gives me the fluency to work closely with development teams on functional specifications, software integration, and change management, while my MBA provides the strategic perspective to align technology solutions with organisational goals. I am experienced with requirements elicitation techniques including stakeholder interviews, workshops, and document analysis, and I use tools such as Jira, Confluence, Visio, and SQL daily. I am particularly drawn to SFU's focus on improving the digital experience for students, faculty, and staff — a mission that resonates with my passion for using technology to serve communities.

I would welcome the opportunity to discuss how my experience in business process improvement, requirements analysis, and cross-functional facilitation can support SFU IT Services. Thank you for considering my application.

Sincerely,

Ayomide Abass
