

Shivani A
Sr. Business Analyst

Email: Shivaniabbu02@gmail.com

Contact No: 2898597160

Summary:

Senior Business Analyst with 8+ years of experience delivering data-driven solutions across investment analytics, product strategy, and operational optimization in fintech and e-commerce domains. Proficient in Power BI, SQL, Alteryx, Excel, JIRA, Confluence, and statistical tools (Python, SAS), with deep expertise in data modeling, portfolio analysis, and requirement documentation (BRD/FRD). Adept at translating complex datasets into actionable insights, automating reporting pipelines, and driving informed decision-making through robust dashboards and analytical models. Recognized for enhancing fund performance, streamlining global processes, and fostering cross-functional collaboration in Agile environments.

Technical Skills:

- **Business Analysis & Documentation:** BRD, FRD, User Stories, Epics, Acceptance Criteria, Agile Methodology, Scrum Framework, Requirement Traceability Matrix (RTM), Stakeholder Communication & Strategic Presentation, Confluence (for centralized documentation), JIRA (for backlog, ticketing, Sprint planning).
- **Data Analytics & BI Tools:** Power BI, Tableau Amazon Quick Sight, Excel, SAS, ETL, Alteryx, SQL, Python.
- **Data Integration & Formats:** XML & JSON, API payload construction and validation, Data mapping and system interface definition.
- **Automation & Scripting:** VBA for Excel automation, Python, HTML.
- **Project Management & Tools:** Lean Six Sigma, Sprint planning and tracking in JIRA, On-demand reporting and ad-hoc analysis.

Employment History:

Sr. Business Analyst| Questrade Financial - North York, ON| June 2023 - Till Date

- Analysed investment, portfolio, and market data using Alteryx and advanced data modelling techniques to generate insights that improved product strategy, asset allocation, and risk assessment, directly contributing to enhanced fund performance and alignment with evolving market conditions and investor expectations.
- Developed and maintained dynamic Power BI dashboards integrating fund performance, benchmark comparisons, and client behavior metrics, enabling senior investment leaders to monitor portfolio health, detect trends, and make proactive, data-driven decisions for strategic planning and product enhancements.
- Created detailed peer benchmarking and competitor analysis using Excel Sheets, market data, and client feedback, identifying positioning gaps and proposing strategic changes that improved differentiation, increased investor engagement, and supported stronger market share within core investment categories.
- Collaborated with engineering teams to ensure data accuracy by validating pipelines and performing root cause analysis using SAS and SQL, maintaining high data integrity standards and supporting critical reporting used in investment strategy reviews and performance evaluations.
- Conducted portfolio simulations and investment hypothesis testing using data modeling frameworks, producing targeted risk-return analysis and supporting tactical recommendations that shaped asset allocation strategies and contributed to better fund performance over short- and long-term horizons.
- Managed ad hoc investment research and analysis tasks through JIRA, ensuring transparency, task ownership, and delivery of on-demand insights aligned with product team priorities and leadership queries related to product utilization, investor trends, and market shifts.
- Maintained structured business and technical documentation in Confluence, detailing data sources, logic, KPI definitions, and report templates to ensure analytic consistency, streamline cross-functional collaboration, and support rapid onboarding and handoffs across investment and product teams.
- Delivered high-impact presentations by translating complex quantitative results into strategic insights; supported leadership decisions using SQL and Excel, conducting rapid ad-hoc analyses on fund flows, asset allocations, and investor behaviours to validate investment strategy and product direction.

Associate Business Analyst - Amazon, India |Feb 2019 – April 2023

- Conducted requirement gathering, documented BRD/FRD via Jira and Confluence, modeled ETLM pipelines, and developed dashboards using Excel (VBA, pivot tables, Power Pivot), Tableau, and SQL to automate reporting and streamline operational analytics across cross-functional, global expansion projects.
- Delivered statistical analyses, including regressions and t-tests using Python and R, to drive data-driven decisions. Designed forecasting models, performance benchmarks, and KPIs while aligning business recommendations with strategic initiatives and presenting findings with clarity to stakeholders and leadership.
- Developed and optimized automated data pipelines integrating XML, JSON, and SQL datasets. Built QuickSight and Power BI dashboards for metrics tracking and customer experience improvement. Applied macros and advanced Excel to enhance reporting accuracy, speed, and monitoring capabilities.
- Collaborated with project managers and cross-functional teams to implement Lean Six Sigma initiatives that improved process efficiency, enabled work authorization process optimization, and delivered program outcomes aligned with enterprise-wide tactical planning and stakeholder engagement.
- Developed data management systems and conducted query optimization to improve scalability and minimize processing latency. Created secure, scalable dashboards and report automation pipelines that supported program ownership and performance benchmarking across diverse data systems.
- Applied HTML and Java to support automation workflows and dashboard UI customization. Built and maintained automated KPIs and metrics dashboards integrated into business intelligence ecosystems. Enhanced data integrity while ensuring discretion and security of sensitive datasets.
- Facilitated strategic communication, stakeholder influence, and consensus-building using strong presentation skills. Actively supported performance tracking, customer service improvements, and report automation while demonstrating initiative, curiosity, adaptability, time management, and continuous learning in high-volume, fast-paced environments.
- Demonstrated ownership mindset and collaboration in delivering high-impact automation solutions. Managed complex analytical projects involving business analysis, data modeling, and process optimization. Provided strategic insight using BI tools and statistical forecasting to support decision-makers in operational and enterprise-level goals.

Associate Consultant(Business Analyst) – Capgemini, India| Aug 2016 - Jan 2019

- Collaborated with business teams to analyze requirements and developed comprehensive BRD documents that captured stakeholder needs, enabling alignment with project goals and serving as a foundational reference for developers, testers, and product managers throughout the agile development lifecycle.
- Created detailed FRD specifications by translating business processes into functional system requirements, using workflow diagrams and process models to guide technical teams in building scalable, user-centered features that aligned with business objectives and architectural standards.
- Maintained structured documentation for all analysis deliverables, process changes, and solution designs, ensuring traceability and version control while improving knowledge transfer across teams during project handoffs, audits, and solution implementation cycles.
- Tracked user stories, epics, and sprint progress using JIRA, enabling visibility into project timelines and ensuring backlog refinement, acceptance criteria, and workflow statuses were consistently updated in alignment with agile best practices and stakeholder expectations.
- Utilized Confluence to maintain centralized business analysis artifacts, project notes, and requirement traceability matrices, promoting cross-functional collaboration and keeping teams aligned through shared documentation, templates, and process wikis.
- Defined system interface needs and data mapping by capturing examples using XML schemas during integration discussions, enabling accurate communication with development teams and ensuring proper formatting and structure of transmitted data between platforms.
- Collaborated with developers and QA teams to structure payload data using JSON, validating key-value pair formatting and content expectations during API testing and ensuring proper support for downstream application logic and user functionality.
- Logged and managed detailed JIRA tickets for new feature requests, enhancements, and bug tracking, ensuring traceability of business requirements from inception through deployment and providing real-time visibility into development status and issue resolution.

Education:

- Bachelor of Technology in Computer Science from JNTUH, India – 2016.
