Re: Business Analyst

Dear Team:

I am writing to apply for the Business Analyst position with SFU IT Services. With over a decade of business analysis, project management, and process improvement experience in complex organizations, combined with current advanced training in data analytics and systems analysis, I am confident I can contribute meaningfully to SFU's mission of advancing an inclusive and sustainable future through technology-enabled solutions. I am completing my Computing Studies and Information Systems: Data Analytics post-baccalaureate diploma at Douglas College in April 2026 and am available to begin in the first or second week of May.

In my recent Business Analyst Co-op role with Vancouver Coastal Health, I worked on medium-complexity clinical and operational projects that closely mirror the cross-functional, stakeholder-rich environment at SFU. I analyzed Emergency Department and UPCC visit data using ThoughtSpot and Cerner Discern, and applied statistical techniques such as t-testing to understand the impact of interventions on patient length of stay. I also mapped clinical workflows and gathered requirements for initiatives such as kiosk-based patient registration and wayfinding, using BPMN to document current and future-state processes. This experience strengthened my ability to translate business needs into clear, testable requirements and functional specifications, while collaborating with clinicians, managers, and technical teams.

Earlier in my career as a Business Analyst at Deutsche Bank, I supported the implementation of PnL reporting systems used by over 500 traders across the APAC region. I partnered closely with stakeholders to elicit requirements, design and refine reporting workflows, and lead user acceptance testing and training. Through significant process reengineering and VBA automation, I reduced daily reporting time by 92% (from 60 minutes to 5 minutes), demonstrating my focus on delivering measurable efficiency gains and robust data quality. This background has given me a strong grounding in working with enterprise-level applications in large, technically focused environments, and in managing change so that users adopt new tools successfully.

Beyond business analysis, I bring substantial experience in process improvement and project delivery. As Operations Manager at Cooee Inc. and Project Manager at Resources Connection Inc., I led cross-functional teams, reengineered onboarding and operational processes, and implemented low-cost digital solutions, such as a Google Suite-based applicant tracking system and integrated PMO scorecards. These initiatives reduced onboarding cycle time by 50%, generated significant cost savings, and improved visibility for leadership. I have consistently facilitated workshops, conducted gap analyses, and documented "as is" and "to be" processes, which aligns well with SFU's emphasis on business process reengineering and continuous improvement.

My academic work further reinforces my practical experience. I have earned top marks Dean's List with a 4.08/4.33 cumulative GPA in courses such as Systems Analysis & Design, Software Engineering, Database Systems, Data Analytics, Data Visualization, and Machine Learning. I have also completed an EMS data analytics and forecasting project through Riipen, giving me additional experience with real-world data, predictive modeling, and communicating insights to stakeholders. Complementing this are industry-recognized certifications, including IBM Business Analyst Professional, Google Project Management, Google Data Analytics, and Microsoft Office Specialist: Expert, which speak to my knowledge of requirements elicitation, testing and quality assurance, and change management best practices.

I am particularly drawn to SFU IT Services because of its focus on improving the digital experience for students, faculty, researchers, and staff. I believe my blend of business analysis, data analytics, BPMN-based process mapping, and stakeholder engagement experience positions me well to support the design and implementation of medium to large software solutions that deliver tangible value to the SFU community. I am enthusiastic about the opportunity to contribute to your projects, mentor stakeholders through change, and continue growing as part of a collaborative, innovative team.

Thank you for considering my application. I would welcome the opportunity to discuss how my background and skills can support SFU's academic and research mission.

Sincerely,

A handwritten signature in dark ink, appearing to read "Michaelangelo Adriatico". The signature is fluid and cursive, with the first name being more prominent.
